The value,  $y$ , of a \$15,000 investment over  $x$  years is represented by the equation

$$y = 15000(1.2)^x$$

What is the investment worth after 6 years?

Kathy plans to purchase a car that depreciates (loses value) at a rate of 14% per year. The initial cost of the car is \$21,000. Which equation represents the value,  $v$ , of the car after 3 years?

The population of Henderson City was 3,381,000 in 1994, and is growing at an annual rate of 1.8%. If this growth rate continues, what will the approximate population of Henderson City be in the year 2000?
