

9-1 Adding and Subtracting Polynomials

A polynomial shown below is in **standard form of a polynomial** means that the degrees of its monomial term decreases from left to right.

$$3x^4 + 5x^2 - 7x + 1$$

After you simplify a polynomial by combining like terms, you will need to place the polynomial in standard form.

Write each polynomial in standard form.

$5 - 2x$	$3x^4 - 4 + 2x^2 + 5x^4$	$6x^2 + 7 - 9x^4$	$3y - 4 - y^3$
$-2x + 5$	$8x^4 + 2x^2 - 4$	$-9x^4 + 6x^2 + 7$	$-y^3 + 3y - 4$

You can add polynomials by combining like terms.

<p>1. $(4x^2 + 6x + 7) + (2x^2 - 9x + 1)$</p> <p>$6x^2 - 3x + 8$</p>	<p>2. Find the sum of $(w^2 + w - 4)$ and $(8 + 7w^2 - 4w)$</p> <p>$(w^2 + w - 4) + (8 + 7w^2 - 4w)$</p> <p>$8w^2 - 3w + 4$</p>
--	---

You can subtract polynomials the same way but you must remember two things:

1. You have to decide which polynomial will come first.
2. You must distribute the negative to the second term.

<p>3. $(7h^2 + 4h - 8) - (3h^2 - 2h + 10)$</p> <p>$7h^2 + 4h - 8 - 3h^2 + 2h - 10$</p> <p>$4h^2 + 6h - 18$</p>	<p>4. Subtract $(-6y^2 + y + 4)$ from $(-7y^2 + 3y - 1)$</p> <p>$(-7y^2 + 3y - 1) - (-6y^2 + y + 4)$</p> <p>$-7y^2 + 3y - 1 + 6y^2 - y - 4$</p> <p>$-1y^2 + 2y - 5$</p> <p>FROM MEANS FIRST</p>
---	--

Finding Dimensions, Perimeter, Area, etc. of Figures

1. Express the Perimeter in simplest form.

$$26x + 6$$

2. Express the Area in simplest form.

$$(x+7)(3x-8)$$

$$3x^2 + 13x - 56$$

3. Find an expression for the missing length.

$$\text{Perimeter} = 23a - 7$$

$$9a - 6$$

4. Express the Area in simplest form.

$$\text{Area} = \frac{1}{2}bh$$

$$\frac{1}{2}(2x)(x+4)$$

$$x^2 + 4x$$

5. The accompanying diagram shows a square with side $(x-3)$ inside a square with side $(2x+5)$. Express the area of the shaded region in simplest form.

$$A_{\text{BIG } \square} - A_{\text{SMALL } \square}$$

$$(2x+5)(2x+5) - (x-3)(x-3)$$

$$(4x^2 + 20x + 25) - (x^2 - 6x + 9)$$

$$4x^2 + 20x + 25 - x^2 + 6x - 9$$

$$3x^2 + 26x + 16$$

Simplify. Write each answer in simplest standard form.

1. What is the sum of $4x^3 + 6x^2 + 2x - 3$ and $3x^3 + 3x^2 - 5x - 5$?

2. Simplify the expression $(x^2 - 5x - 2) - (-6x^2 - 7x - 3)$.

3. Subtract $2x^2 + 3xy - 6$ from $x^2 - 7xy + 2$.

4. Express the Perimeter in simplest form.

5. Find an expression for the missing length.

Perimeter = $14y - 6$

6. A plastic storage box in the shape of a rectangular prism has a length of $x + 3$, a width of $x - 4$, and a height of 5. Represent the surface area of the box as a trinomial in terms of x .

(Hint: The equation for the surface area of a rectangular prism is $SA = 2lw + 2lh + 2wh$)
